

### **Bridging the Gap**

KLA collaborated with Ankrom Moisan Architects on the design of the courtyard entry arch that bridges the gap between the two condominium building wings.

Constructed of galvanized steel framing and woven wire mesh, the structure provides a semi-transparent edge to the courtyard and a visual link between the two building segments. Vines planted at the base of the structure grow through the arch adding a textural play within the frame.

KLA's attention to design details including interior and exterior uplighting creates an exquisite frame for views in and out of the garden courtyard in the day and night.
